

Screen	Notes
AbaQuest 3	
	1. This section needs an explainer prior to starting. 2. This would be perfect, just with a fully designed junior counter and ther should be not mor than 3 on the screen at a time. 3. Here's a visual (here's little eye candy from some of the content I teach with to help with design inspiration) 
For the mini lesson, clear 'lesson' mode where students learn and do nothing elsen or they can engage immediately after. Where for each number (0, 1, 5, 9): • Abby demonstrates the position • Beads move automatically	

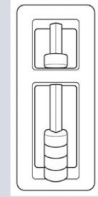

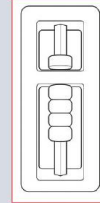

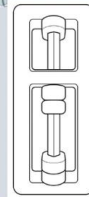

Mini Lesson: Learn how to position your junior counter to '1'

To position your junior to show the number 1, you have to move one lower bead up to the answer rod. Like this....

Mini Lesson: Practice the '1' position

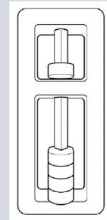

Now its your turn. Change each junior counter below into the '1' position

Mini Lesson: Guess how to position your junior counter to '5'

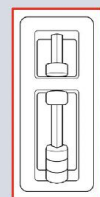

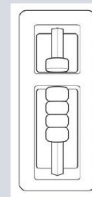

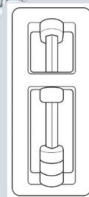

The number 5 has a very, very special position on the junior counter. Can you guess why? Because we finally get to move the upper bead. Guess how to position your junior counter to the number 5 below

Mini Lesson: Practice the '5' position

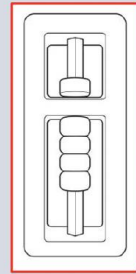

Now its your turn. Change each junior counter below into the '5' position

Mini Lesson: Learn how to position your junior counter to '9'

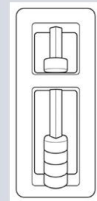

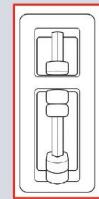

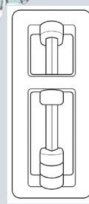

The number 6 has a very, very special position on the junior counter.
Can you guess why?
Because we finally get to move the upper bead.
Guess how to position your junior counter to the number 5 below

Mini Lesson: Practice the '9' position

Now it's your turn. Change each junior counter below into the number '9' position

For this lesson component:

1. There should be one junior counter demo on the screen at a time- not to confuse kids
2. Also, I really like the concept you have here of going through all 0-9 number briefly, but we should tell users that we are only going to focus on numbers 0, 1, 5 and 9.
3. Here's a link to a quick lesson that may help with your design:
https://drive.google.com/file/d/16zwL6du9lc1qQqMt_SL1l_M5d7y-P8Oh/view?usp=sharing
4. Here's an example of how we may be able to emphasize the number and position side by side:
- 5.

Discovery Time: Where do numbers live?

Abby says: "Each number has its own special home on our Junior Counter! Let's discover them together!"

Lower Beads (0-4)

- Zero (0): All beads away from the bar
- One (1): Move 1 lower bead up
- Two-Four: Add more lower beads

Upper Beads (5-9)

- Five (5): Move the top bead down (equals 5!)
- Six-Nine: Top bead + lower beads
- Nine (9): Top bead + all 4 lower beads

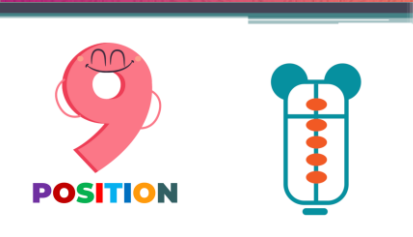

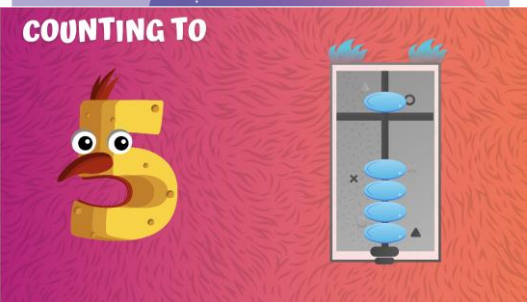

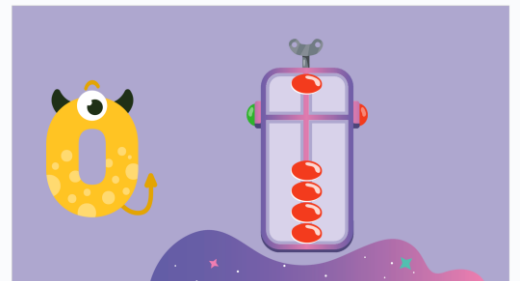

Discovery Tip: The top bead is worth five! Lower beads are worth one each.

Let's Practice! →

Remember: One uses a lower bead. Slide it up!

1. Instead of using 'build the number 1' use "position to 1 or position to number 1"
2. Love the sound effects here!
3. Here are a few screen shot examples of some of my animated powerpoints that students love:

What's missing from AbaQuest-3

Story Time with Mistress Creola

In Mistress Creola's class, students are learning number positions...

Ameer

Ameer tried to show the number 5 but used the wrong beads.

Abby prompts you:

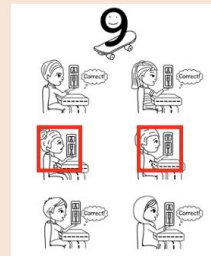

Help Ameer: Show the number 5 on the abacus.

1. This seems more like the post test then the story time. Here are some screen shots of lesson.
2. Here are screenshots of the aligned story time for this module"
3. It would be nice if student could touch the screen to respond to the engagement questions built into the story mode.

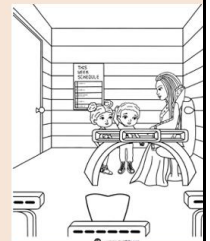

Step 4- Story: Making Numbers Come Alive (9)

Touch the student who doesn't now have the correct number position for 9.

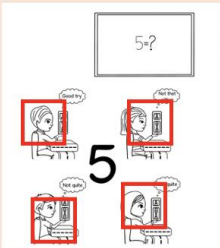

Step 4- Story: Making Numbers Come Alive (9)

After class, when all the other students had left, Mistress Creola spoke to Ameer and Ameerah. "I am very disappointed that you both pretended to be sick. Why did you do this?" Ameer and Ameerah looked at the ground. Finally, Ameerah said, "We didn't want you to think that we weren't good students."

Step 4- Story: Making Numbers Come Alive (5)

Mistress Creola continued,
"Who thinks they
know what the number 5
position is?"
All of the students give their
best effort to figure
out the 5-position.

Step 4- Story: Making Numbers Come Alive (5)

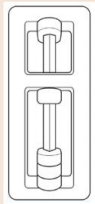

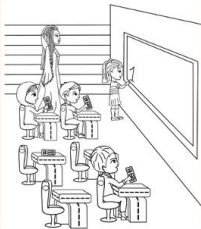

"Then it must be this position," said
Maimuna.
"Yes!"
Maimuna beamed with pride.

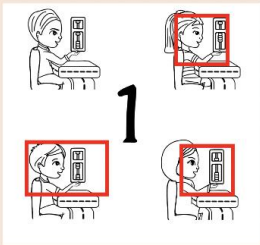

Step 4- Story: Making Numbers Come Alive (5)

Mistress Creola: "Now let's make one."
"Who will try?"
Student A (confident): "I'll go first!"

Abby's prompt
'Can you help the student position to the num

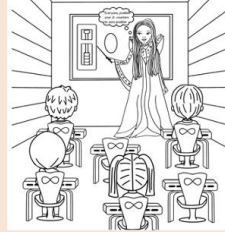

Step 4- Story: Making Numbers Come Alive (1)

Did all of the students get the number 1 position
correct?

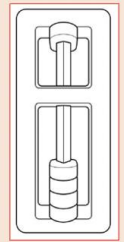

Step 4- Story: Making Numbers Come Alive

"Creola says, 'Zero means no beads at the neck.'

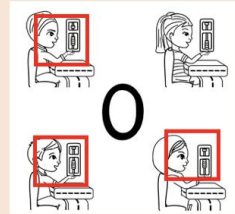

Abby's prompt

'Can you help the students and zero?'"

Step 4- Story: Making Numbers Come Alive (0)

Point to the student who is don't have the correct z position.

1. Each AbaQuest needs to have:
 - a. Welcome
 - b. Pre-test
 - c. Mini lesson/ practice
 - d. Image-rich Story (quest)
 - e. post-test
2. Obvious transition from module to module
